Subject: Trijicon Counterfeit Products

Trijicon takes counterfeiting seriously. Counterfeiting is a crime, involving the manufacturing or distribution of goods under someone else's name and without their permission. Counterfeit goods are generally made from lower quality components, in an attempt to sell a cheap imitation of similar goods produced by brands consumers know and trust. Counterfeit goods span across multiple industries to include defense items like Trijicon's.

The vast majority of Trijicon products, including ACOG®, VCOG®, RMR®, SRO®, Reflex, MRO®, Iron Sights, MGRS®, CCAS®, Thermal Optics, Ventus™, Mounts, and Archery Sights are designed, engineered, machined, and assembled at our facilities in Wixom, Michigan or Auburn, California, and are therefore 100% Made in the USA.

Our AccuPoint® riflescopes are assembled in the USA but have significant components purchased in Japan.

Our Huron™, Ascent™, Tenmile™, and Credo™ riflescopes are manufactured in Japan according to our design and testing requirements. All Trijicon products are designed in Michigan and have the same stringent quality processes applied to them, including the Science of Brilliant™ testing methodology. All Trijicon products are backed by our limited lifetime warranty. Each product is marked according to its origin.

None of the above referenced Trijicon products are manufactured in China and will not bear any mark(s) indicating Chinese origin. If you suspect a counterfeit Trijicon product, please contact our Corporate Office:
